**Thanks for reference**

**Right Digital soft tissue mammography & high resolution sonography revealed :**

- Scattered densities of glandular condensation .
- Multiple scattered calcified and non-calcified lesions.
- No speculated masses or pathological microcalcifications.
- Normal skin thickness & contour.
- Echogenic mammary parenchyma.
- Scattered multiple variable sized hypoechoic lesions, some are calcified with one at the right supra-areolar measures a 10x8mm.
- Right likely non-specific axillary lymph nodes.
- Left mastectomy bed is free.

**OPINION :**

Status follow up after left mastectomy for pathologically proven study showed multiple probably benign looking lesions likely (post traumatic /post fat injection ).

Mild mammary fibroadenosis .

**BIRADS 3.**

**Half-annual screening is recommended.**

*Kindly a  
L*

-----  
*BIRADS scoring is the breast imaging and reporting data system for classifying breast lesions :*

*BIRADS 0 : needs further investigations.*

*BIRADS 1: Normal findings.*

*BIRADS 2 : Benign .*

*BIRADS 3 : Probably benign.*

*BIRADS 4 : probably malignant.*

*BIRADS 5 : Malignant.*

*BIRADS 6 : Proven pathologically malignant.*
